What are the models?

Pure research

Whole ecosystem

IP and incubation

Tons of data and cash

Solve real business problems

IP and talent drain

Politics and complexity

No single product focus

Hog talent
Opensource

Research a luxury

What makes a good enterprise AI startup?

1. Full stack products
2. Subject matter expertise
3. Proprietary data
4. AI delivers core value

**Vertical AI Startups: Solving Industry-specific Problems by
Combining AI and Subject Matter Expertise**

Machine Radiologists

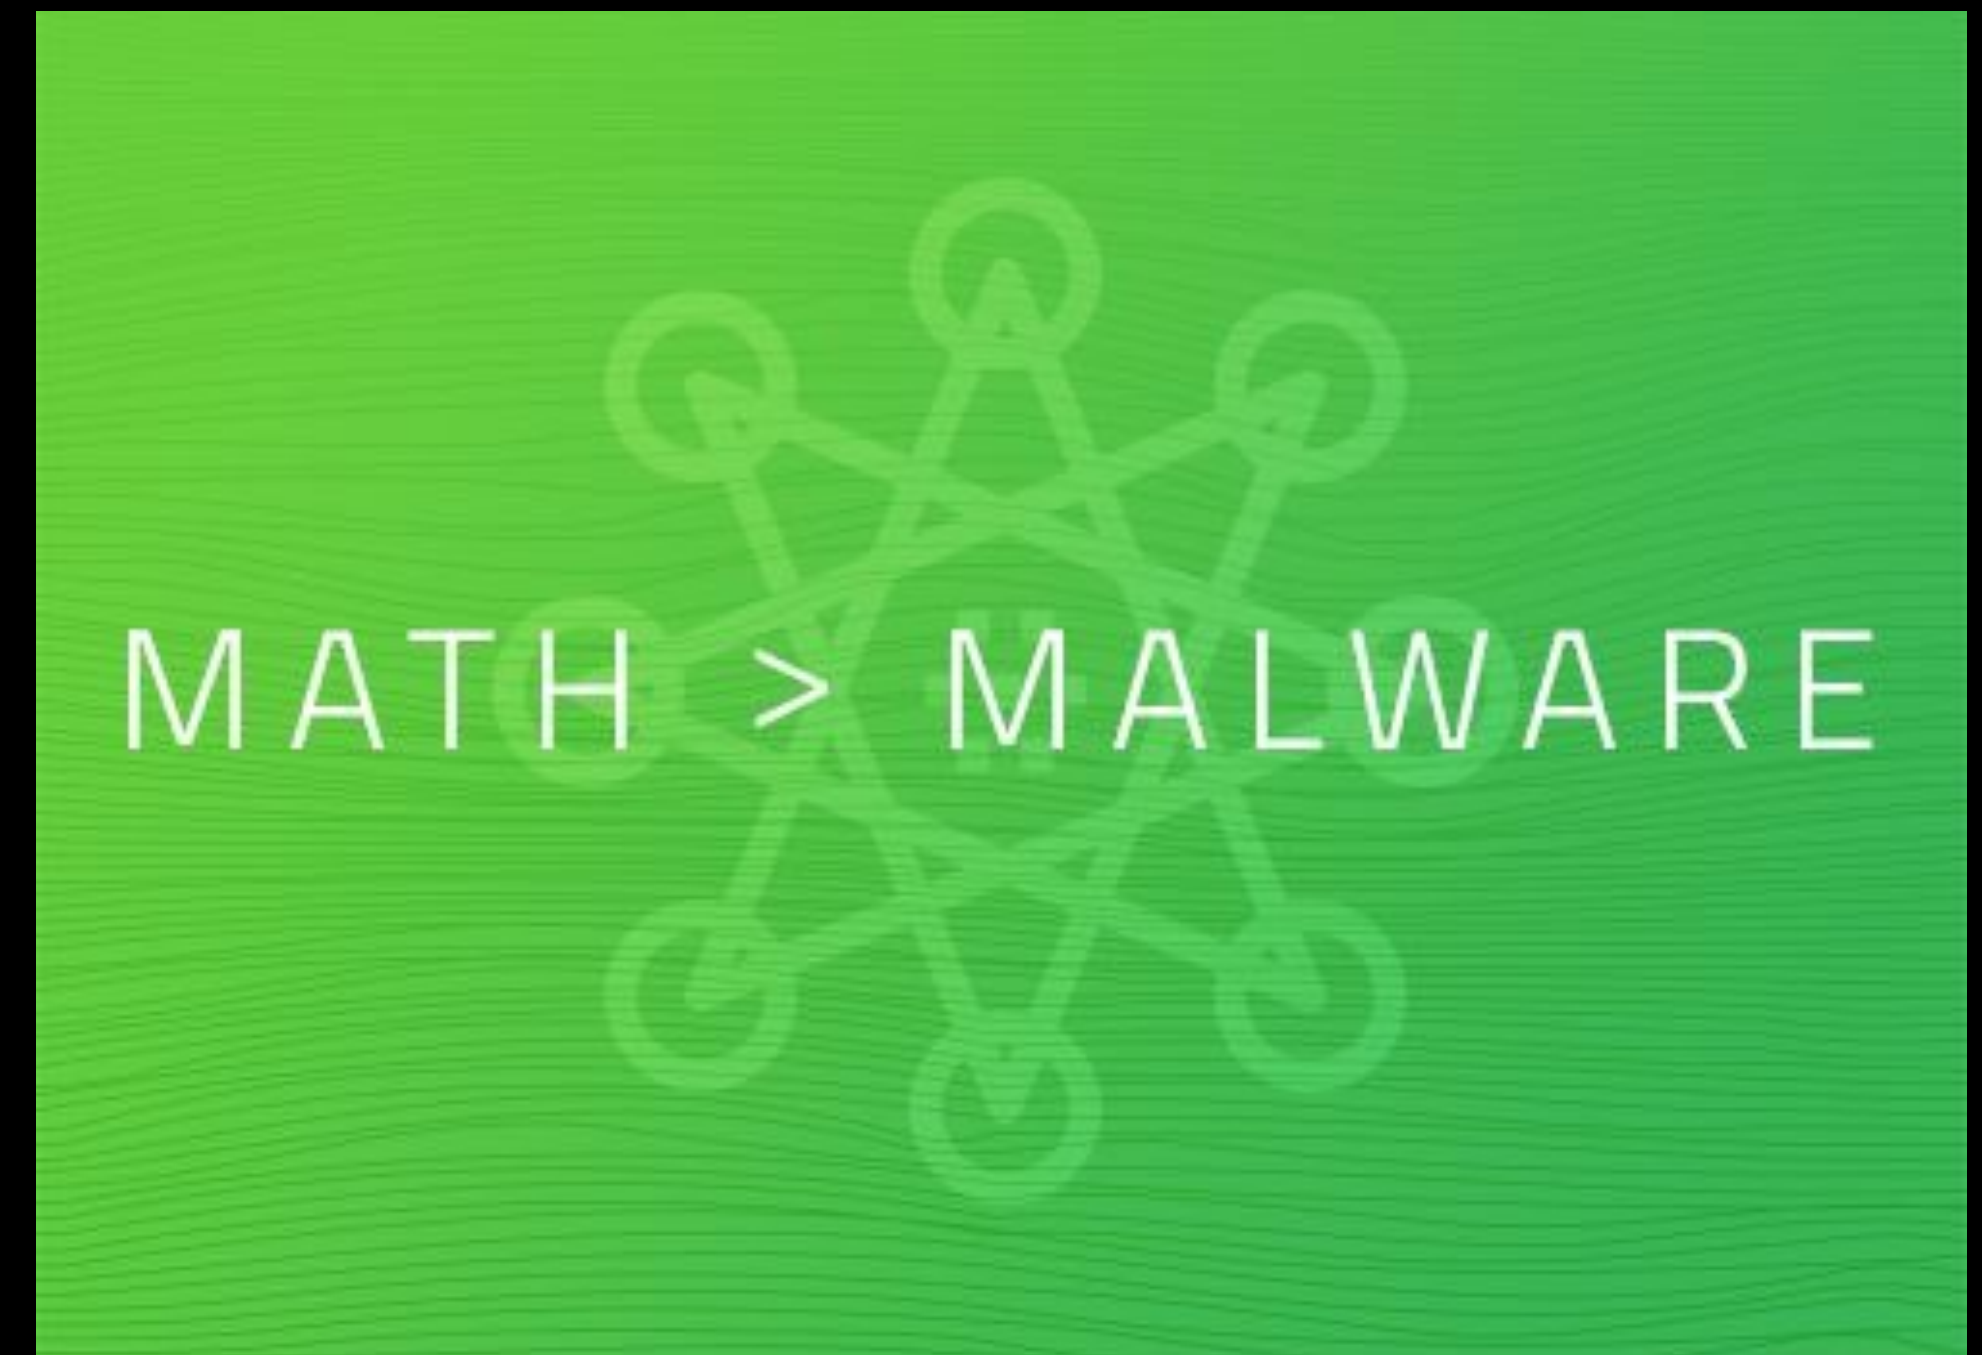

Machine Due Diligence

Trusted on hundreds of billions of dollars of transactions to date, Kira automates the extraction and analysis of key provisions from across your contracts.

Probabilistic Endpoint Security

integrate.ai

More value in consumer internet companies than just advertising.

Aggregate data will boost model performance.

There are multiple trust issues to exploit and resolve.

Usage Metrics

User Growth

Startup Traction

Growth Hacking

+6

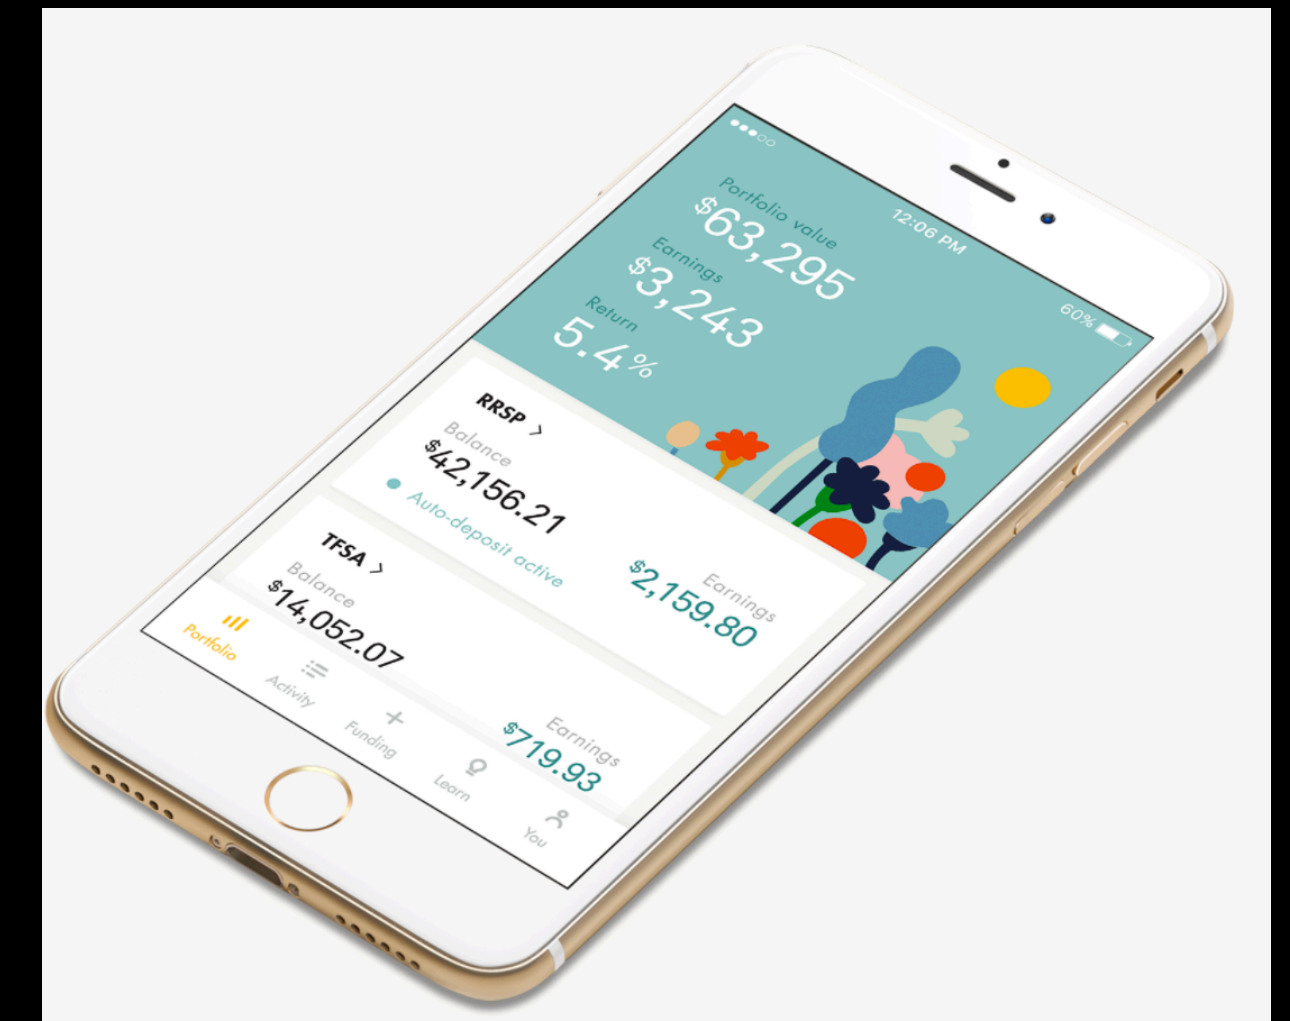

Growth Hacking: How do you find insights like Facebook's "7 friends in 10 days" to grow your product faster?

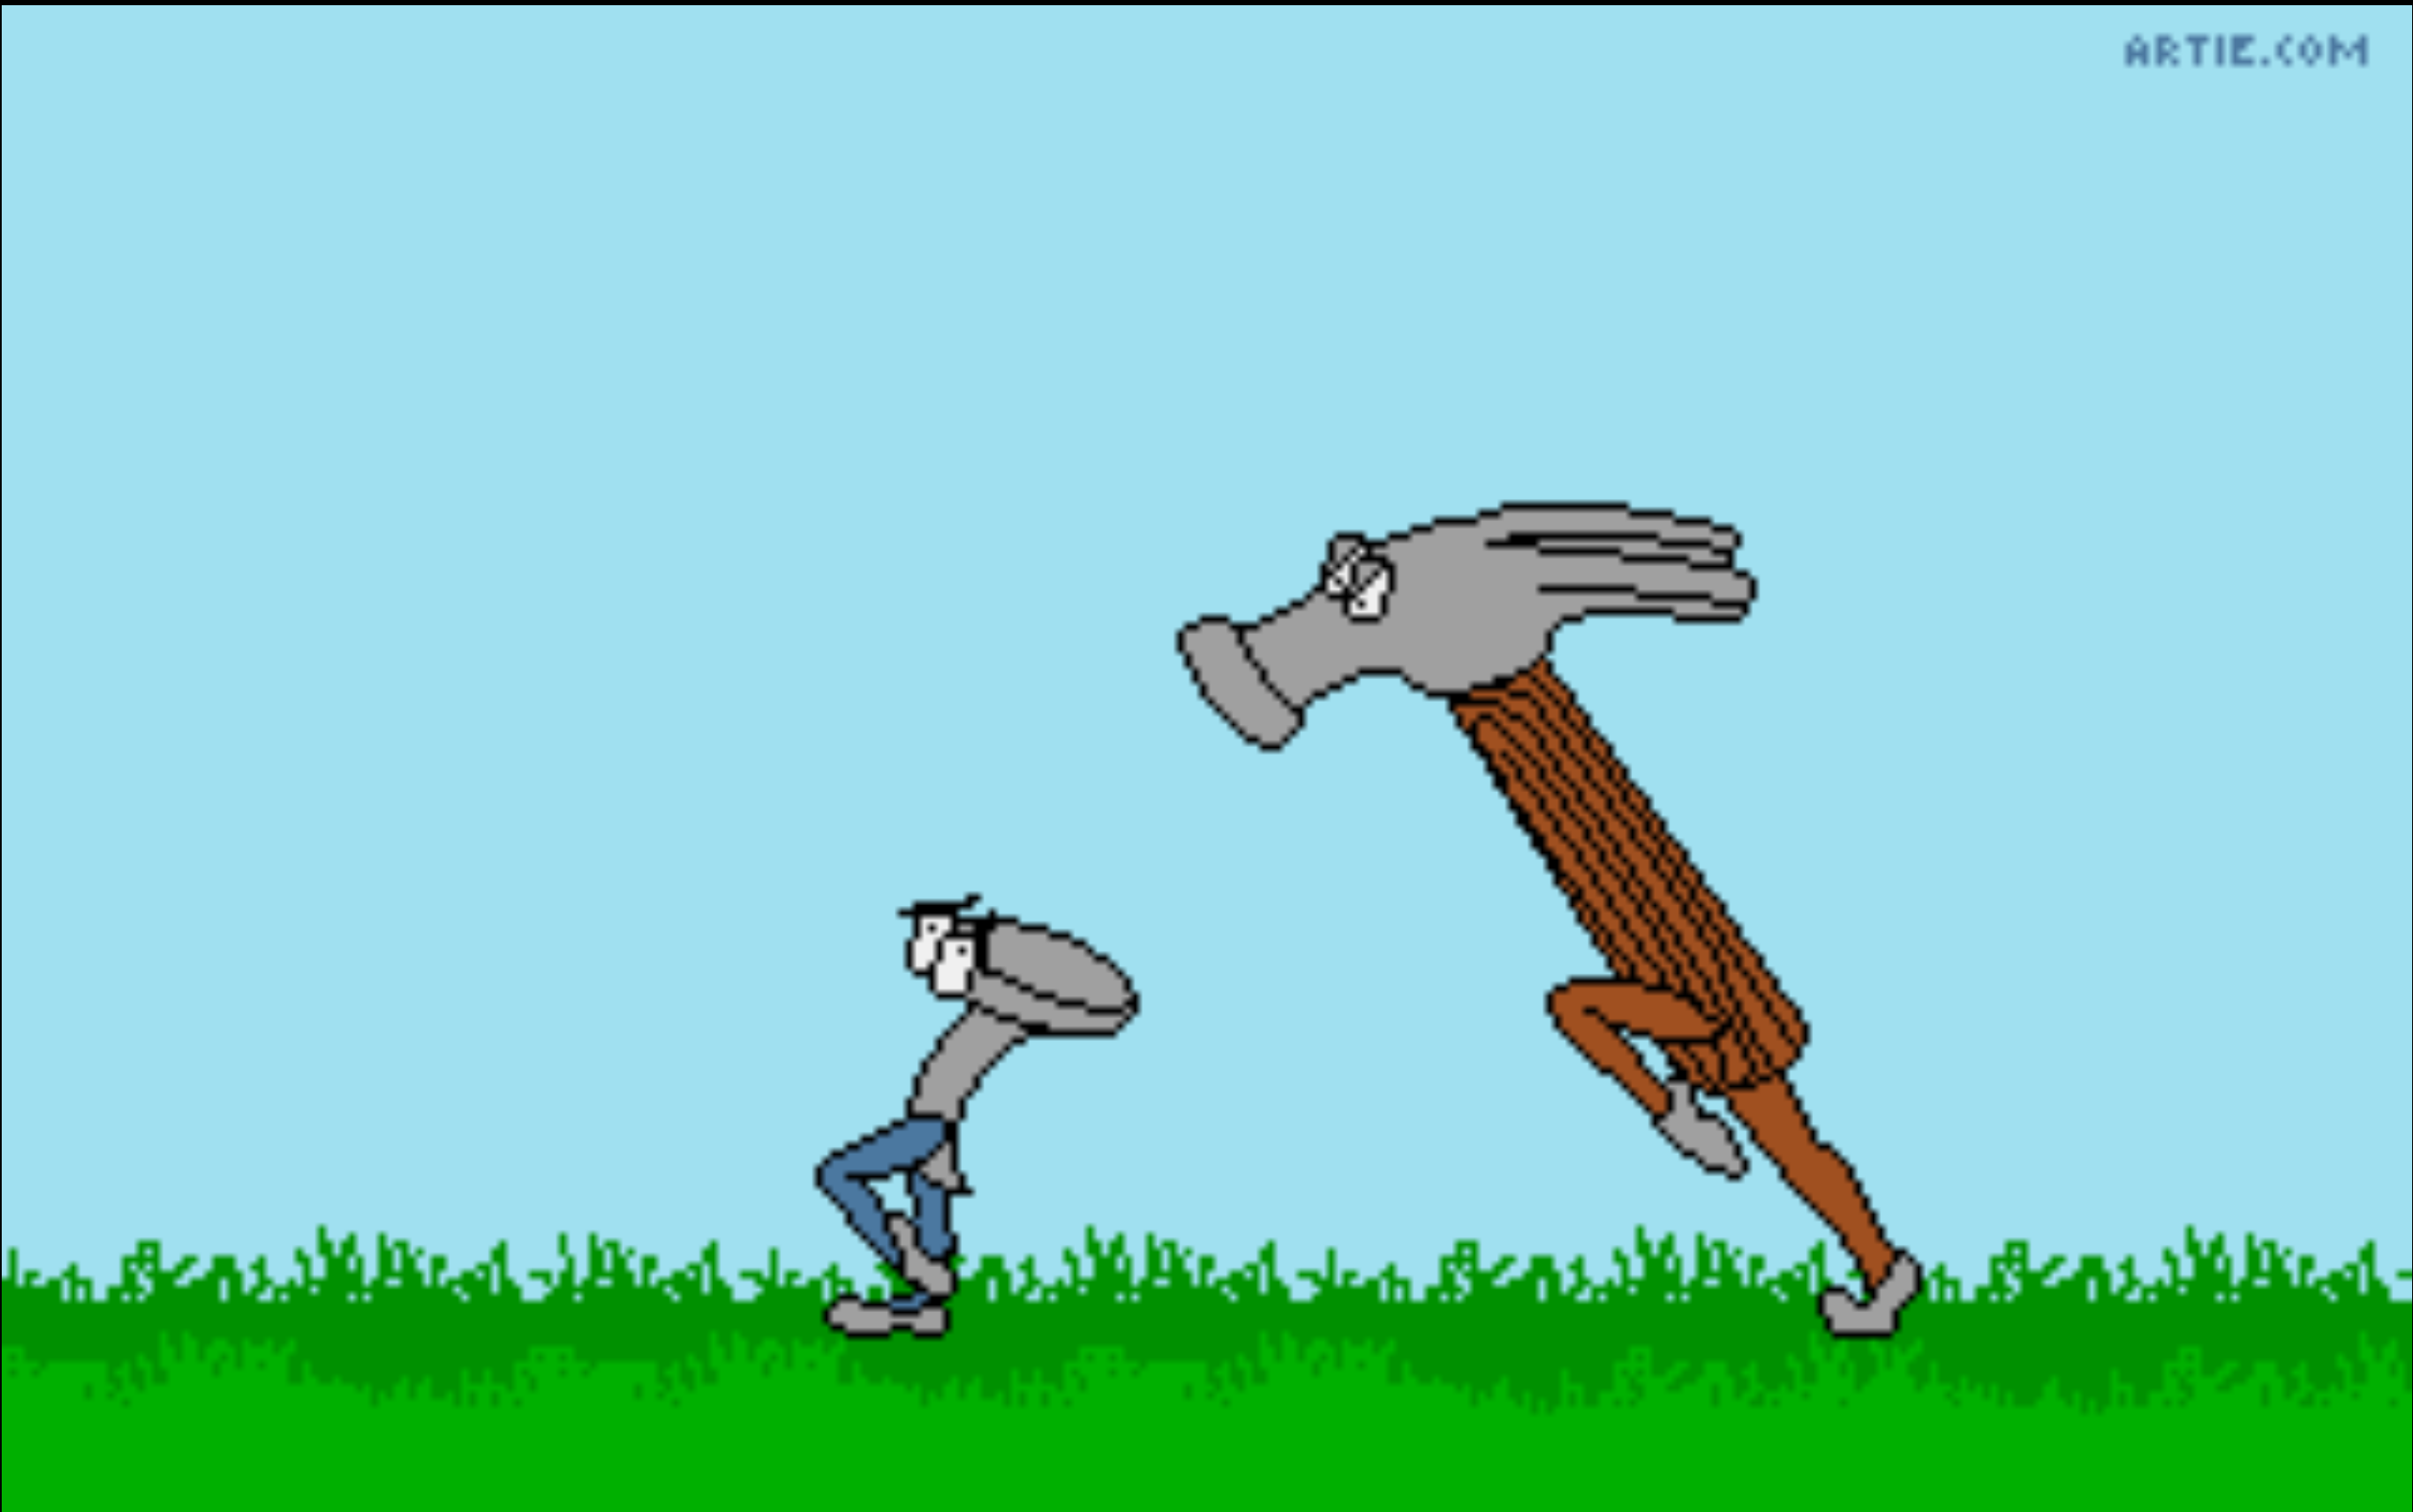

Assuming one tracks core product engagement actions and has data scale, how does one (having SQL chops) uncover tipping points like these for a (generic) Web app?

Prescriptive Marketing

- Find small action to serve as proxy for a long-term goal
- Find correlations between successful customers and new prospects
- Drive behaviour on highest likely LTV during tight window of opportunity
- Collect feedback and measure success

Watch out for...

Narrative Science

Over the past three months, the consensus estimate has sagged from \$1.25. For the fiscal year, analysts are expecting earnings of \$5.75 per share. A year after being \$1.37 billion, analysts expect revenue to fall 1% year-over-year to \$1.35 billion for the quarter. For the year, revenue is expected to come in at \$5.93 billion.

A year-over-year revenue decrease in the fourth quarter followed by two consecutive quarters of revenue increases.
